Each of the editors mentioned above is self-responsible for the contents of his composed column. Furthermore, we cannot be responsible for the contents of advertisements published in DX MAGAZINE.

Please do not forget to write all contributions for the different sections on separate sheets of paper, so that we are able to distribute them to the competent section editors.

WORLD RADIO TV HANDBOOK 2001

Prices for orders from WORLDWIDE DX CLUB · Preise bei Bestellung beim WORLDWIDE DX CLUB:

DM 50.00, € 25.56, f52.50, US\$30.45 or 25 IRC's. Extra for air mail: DM 18.00, € 9.20, f19.80, US\$11.00 or 9 IRC's.

These prices include postage and packing. Delivery against advance payment by International Money Order, cheque or cash in any convertible currency, Postal Money Order, UNESCO coupons (please add 5 % surcharge), IRC's or transfer to our postal giro accounts Frankfurt/Germany No. 2890 10-605 or Arnhem/Netherlands No. 3822840. IRC's can only be accepted from countries, in which payments can not be made by any other means.

Der obige Preis enthält Porto und Verpackung. Lieferung gegen Vorauszahlung durch Überweisung, Scheck, Postanweisung, Bargeld oder IRC's. Postbankkonten: Frankfurt am Main/BRD Nr. 2890 10-605 [Bankleitzahl 500 100 60] und Arnhem/Niederlande Nr. 3822840. Bei Nachnahmelieferung: DM 6,00 Zuschlag. IRC's werden nur aus solchen Ländern akzeptiert, in denen eine Zahlung auf einem anderen Weg nicht möglich ist.

DEADLINE (Redaktionsschluß) for
DX MAGAZINE No. 4 is on March
22nd, 2001, and for DX MAGAZINE
No. 5 on April 19th, 2001.

DX MAGAZINE is the monthly publication of WORLDWIDE DX CLUB, Postfach 12 14, D-61282 Bad Homburg, Germany. Price for a single copy: DM 2.50, €1.28 or 2 International Reply Coupons (IRC's); annual subscription rate: DM 30.00, €15.34 or 15 IRC's. Other currencies and air mail rates on request. Cover: Peter Pohle + Jürgen Kauer (KAVOP)

DX MAGAZINE No. 2

Vol. XXXVI

February 2001

Hello again,

Welcome to another issue of our DX MAGAZINE. Starting this month, all members of our club with e-mail access can subscribe to Wolfgang Bueschel's weekly **TOP NEWS**. Until now these could be found only in the Internet at <www.wwdx.de/topnews.htm>. Just send an e-mail to <mail@wwdxc.de>, and you will regularly receive Wolfgang's **TOP NEWS** by e-mail in the future - free-of-charge. Since we have no more news from inside the club this month, let's just start with our usual news from outside the club:

The 13th International DX Contest **The Grand Tour With Cancer and Capricorn** of Danish Shortwave Club International will run from Friday 23rd March, 1800 UTC, to Sunday 8th April, 2400 UTC. It is open to all shortwave listeners regardless to their membership in any DX club. If you like to receive a copy of the contest form, please write and enclose 1 IRC to Jaroslav Bohac, Jizerska 2900/11, 40011 Usti n.L, Czech Republic. Any questions and remarks on the contest may also be sent by e-mail to: <trams@volny.cz>. The contest fee is DEM 5.00 / IRC 4.00 / US\$ 3.00. Each participant will receive a contest diploma with his/her classification and a list of participants with their results. The first three participants will be awarded non-cash prizes; three additional prizes will be drawn into all participants regardless to their scoring.

Bob Padula has published a special listing **The China Shortwave Guide** in January, including a comprehensive tabulation of data for broadcasters known to be operating in China (international and regional) and in Taiwan (excluding Clandestine stations), which includes the leased relays in those areas by International broadcasters. Also shown are the relays outside of China and Taiwan known to be in use, for China Radio International and Radio Taipei International. The guide runs to over 1000 entries and is available free of charge to anyone via the EDXP homepage at <<http://members.tripod.com/~bpadula/edxp.html>>. It is a compressed Excel 7.0 ".xls" file. The Excel file may be sorted, rearranged, or filtered as required. Each entry shows the network, organisation, frequency, start time, end time, target, language, transmitter site, transmitter country, and broadcast days. The Guide is more than a simple listing: it has various "clickable buttons", in colours, for each of the SW networks, which can be used (optional) for calling up instantaneous listings for each Network. A printed copy is also available in A4 format, 20 pages, showing the data in frequency order. This is available to Australian addresses for Aus\$5 or airmail elsewhere for US\$5 (A\$10) (cash, 7 IRCs, international money orders in Australian currency, mint Australian stamps - cheques not accepted) from: Bob Padula, 404 Mont Albert Road, Surrey Hills, Victoria 3127, Australia.

Ed Mayberry's **International Listener** celebrates its second birthday on the world wide web - a hobby site of seven pages laden with constantly updated information for the shortwave listener (the main jobs are weeding out dead links and adding new ones). The main page has grown to 78 home pages of world band radio stations, with 69 links that launch live or on-demand audio feeds--40 of the most popular are on a drop-down menu. A further 99 links play back specific programs--56 are on drop-down menus. There are links to further collections of stations, as well as schedule sources. The "Shortwave Links" page leads to 54 news sources and 193 shortwave and radio-related sites. There's now an International Listener search engine, plus links to 17 other popular search engines. The "British Radio" page has London and UK stations, and launches 46 different livestream broadcasts. There are links to 28 British newspapers and magazines,

numerous broadcast schedule sources, plus other fun UK stuff like webcams, panoramas, tourism sites and Beatles stuff. The "Television" page has 38 video feeds and TV collections, plus 57 TV program sites. The "Library" page is full of suggested reading material, and the "Multimedia Software" page leads to free software for listening to all this great stuff. And that's not mentioning the monthly round-up of "Shortwave News". All this can be found at: <<http://www.internationalistener.com>>.

As one of the steps in an ongoing reorganisation within CEPT and in order to reduce overheads and increase efficiency, the European Telecommunications Office (ETO) was merged with ERO with effect from 1 January 2001. Some of the tasks previously carried out by ETO have been taken over by ERO, viz numbering, licensing and One-Stop-Shopping, and are being performed on behalf of the ETO Administrative Council and ECTRA. The merger brings the total number of ERO staff to 17: 9 experts covering most fields within the radio- and other telecommunications areas (two of these experts will join the office 1 February and 1 April, respectively) and 8 administrative staff members. (ERO)

Im Januar ist die völlig neubearbeitete und erweiterte 10. Ausgabe des **Weltempfänger-Testbuchs** im Siebel Verlag erschienen. Wie in den früheren Ausgaben stellt der bekannte Rundfunk-Fachjournalist Nils Schiffhauer in dem Handbuch wieder alle auf dem Markt befindlichen Geräte in ausführlichen Tests vor. In einem Extra-Kapitel finden sich informative Hinweise zu vielen älteren Empfängern, die in dieser aktuellen Ausgabe nicht mehr berücksichtigt wurden. Weitere Kapitel beschäftigen sich mit Radio im Internet, WorldSpace, Satellitenradio, PC-Radio und Radio-Software. Das Buch von 320 Seiten (DIN A5) ist zum Preis von DM 34,80 im Buchhandel oder direkt vom Siebel Verlag, Auf dem Steinbüchel 6, D-53340 Meckenheim, erhältlich (ISBN 3-89632-047-5).

Hier schon eine Vorankündigung des traditionsreichen **DX-Camps Döbriach 2001**: Dieses findet voraussichtlich vom 14. Juli bis 4. August am Kärntner Millstättersee statt. Nähere Informationen über das Camp sind erhältlich von: Franz Ladner, Leipzigerstr. 21/28, A-1200 Wien, E-Mail: <fladner@chello.at>.

And with this best wishes and good DX until next month from

(Roger Broadbent - RA via John A. Figliozzi via DXLD via BC-DX #506, 11 Feb 2001)

BANGLADESH: *Bangladesh Betar* is now heard reasonably well in English at 1745-1815 with 'Voice of Islam' and at 1815-1900 with 'Radio Bangladesh' on 7185 (QRM Tirana in Ge 1830-1900) and 9550. They also announce 15520 which is not heard here in Copenhagen. (Erik Koie via BC-DX #503, 2001 Jan 17)

BELARUS: *Radio Stoliza* on 3346 usb is a regional outlet of Belorussian Radio for the region of the capital Minsk ("stoliza" means capital in English). So far known only on regular BR-1 frequencies (49/41mb) twice a day. (Eike Bierwirth via BC-DX #502, 2001 Jan 15)

BELGIUM: Because of the uncertain situation in Congo, *RVI Brussels* temporarily increases its broadcasts in Dutch to CeAF from 1.5 to 5 hours daily:

0500-0700	11650	Wavre	(add it from 18 Jan)
0700-0800	21530	Wavre	(add it from 18 Jan)
1200-1230	21630	Wavre	(normal schedule)
1700-1730	15385	Wavre	(add it from 17 Jan)
1900-2000	15520	DTK Juelich	(normal schedule)

The 1900-2000 broadcast may also be heard in CeAF on 13770 (DTK Juelich to ME & EaAF), 13645 (RNW Madagascar to SoAfrica) and 9925 and 5910 (Wavre to SoEurope). **RTBF International** told, there are not yet any plans for additional broadcasts to CeAfrica. The station maintains its current schedule (totaling 57 hours/week via DTK Juelich to CeAfrica). However, the Wavre tx on 9970 will stay on the air until 2200,

6

instead of 1815 UTC to transmit football coverage on 17, 19 and 20 Jan 2001. So this has nothing to do with the situation in Congo.

(RVI via Paul Brems - DXA via WB, 2001 Jan 17)

CAMBODIA: External service of *National Radio of Cambodia* at 11940 KHz. Address: National Radio of Cambodia, 106 Preah Kossamak Street, Monivong Blvd., Phnom Penh, Cambodia.

(Marcelo Cornachioni in Conexion #92 via WWDXC-HQ; February 4, 2001)

CHINA (Peoples Rep.): The SW broadcasting structure is:

China National Radio Network 1 (CNR1): 2000-1735 (Mandarin)

China National Radio Network 2 (CNR2): 2100-1600 (Mandarin)

Taiwan Network 1 (CNR5): 0055-0615, 0955-0005 (Mandarin)

Taiwan Network 2 (CNR6): 2055-0105, 0355-1805 (Mandarin)

China National Radio - National Minorities Network (Kazakh, Korean, Mongolian, Tibetan, Uighur) (CNR8): 2100-1657

Voice of the Strait: 2055-0100, 0755-1800 (Mandarin and Amoy)

China Radio International - external Services: 0830-0557

CNR3: is also known as "Leisure FM" and is not on SW

CNR4: is the FM service for National Minorities, not on SW

CNR7: is the Voice of Huaxia, not on SW

Note: The English designation is "China National Radio", though it identifies in Mandarin as Central Peoples' Broadcasting Station.

OVERSEAS RELAYS. CRI has overseas relays at:

Bamako (Mali)

Brasilia (Brazil)

Havana (Cuba)

Issoudin (France)

Montsinery (French Guiana)

Noblejas (Spain)

Sackville (Canada)

Samara (Russia)

St. Petersburg (Russia)

Taldom (Russia)

NATIONAL NEWS HOOKUPS: these are given in the National Network 1 1030-1100 and 1200-1230; in National Network 2 1400-1430.

NATIONAL MINORITIES NETWORK (CNR8): This includes relays of the Nei Menggu Radio, and the Tibetan Peoples' Broadcasting Station.

RELAYS OF INTERNATIONAL BROADCASTERS: For B-00, these are

RFI:

0100-0157 French 17710 Beijing

1100-1200 French 11600 Beijing

1200-1257 Khmer 11600 Beijing

1400-1457 English 11610 Xian

1600-1657 French 6090 Kunming

REE:

1000-1157 Spanish 9660 Beijing

1200-1257 Spanish 11910 Xian

VOR:

1500-1557 English 11500 Xian

RCI:

0200-0257 English 17860 and 15260 both Xian

(EDXP #201 - Special Edition, 24 Jan 2001)

CHINA (TAIWAN): B00 schedule of *Central Broadcasting System of Taiwan - CBS* has made extensive changes to its HF usage, affecting Radio Taipei International, leased

relays in Taiwan, and the relays of the Domestic networks. The main features of the new schedule are as follows:

TAIWAN TRANSMITTERS:

6280: RTI. This is a NF, Spanish 2100-2200, relay Domestic Network 0900-1400 (operations may extend outside these hours, to be confirmed)

9610: RTI. Korean and Spanish. This is a weird situation! At 2100-2200, there are two RTI services operating on this channel from separate transmitters - Korean (new service) and Spanish!! The Korean is intended for Asia, and the Spanish for Europe, the latter in parallel with 6280. From 2100-2127 the channel is also used by CRI in Italian, for Europe. Here in Melbourne, the Korean service dominates.

9690: CBS. Extended operations include Cantonese 0200-0300, relay Domestic Network

11550: RTI. Extended operations include English 1600-1700 (new service), Indonesian 1000-1100, Amoy 0000-0100

11725: RTI. Additional service in Vietnamese 0100-0200

11970: RTI. NF, and is an additional service in Russian to Asia 0900-1000

15060: RTI, NF, and is an additional service in Arabic 1600-1700. This freq is also used for Family Radio programming to India 0000-0200 in Hindi and English

15110: Radio Australia, 2330-0030 Vietnamese

15345: Usage of this freq has been reduced, with some services having been transferred to 15270. The channel is now used only for Chinese dialects, Vietnamese and English, in the period 0100-0200, 0300-0500, 0900-1200, 1300-1400, 1500-1600.

FROM OKEECHOBEE:

15440: RTI. Via Okeechobee 0000-0100 Amoy, additional service. This freq is now in use from 2200-0200.

The Okeechobee relay is scheduled:

5810 2100-2300 German, English

5950 2200-0800 English, Spanish, Mandarin, Cantonese

7520 0100-0200 Cantonese

9355 0600-0800, 1900-2300 German, French

9680 0200-0600 English, Mandarin, Cantonese

9690 2300-0100 Spanish, Cantonese

11665 2000-2100 Mandarin

11720 2300-0000 Spanish

11740 0200-0500 English, Cantonese, Spanish

11825 0100-0300 Hakka, English

15215 0200-0300 Spanish

15440 2200-0200 Mandarin, Amoy, Cantonese

15695 1300-1400 Russian

17760 1800-2000 French, Mandarin

The CBS Home Page has also been rearranged, but it is a hotchpotch of outdated, inconsistent, and ambiguous information. It appears that each language department of RTI is responsible for presenting its own Web page, in their own languages, and there is no composite schedule available. The Domestic Service Network data is incomprehensible, being in Chinese dialects.

The SW broadcasting structure in Taiwan is:

CBS Variety Network - 24-hrs (Mandarin)

CBS News Network - 24-hrs (Mandarin)

CBS Popular Network (Mandarin) - relayed on SW at various times

Radio Taipei International (including relays at various times of domestic services)

Voice of Asia - 0500-1700 and 23400-2359 in Mandarin, English, Indonesian, and Thai

Many SW channels are shared across various services.

Some channels may carry more than one service at the same time, using different frequencies, for different target areas.

Frequency coordination between the CBS and the PRC leaves a lot to be desired, with many channels being used simultaneously by both organizations for the same target areas.

The Okeechobee relay is in use from 1300-1400, and 1800-0800. The "silent" periods are 0800-1300 and 1400-1800. Maximum simultaneous transmitter deployment for this relay is between 0100-0200 when six transmitters are in use: 5810 5050 7520 9680 9355 and 15440.

The other relay is in the United Kingdom, at Skelton:

3955 1800-2000

3975 2300-2359

5995 1900-2000 (EDXP #201 - Special Edition, 24 Jan 2001)

GERMANY: Test transmissions starting at 12th February 2001 of *Family Radio - WYFR* via *German Telecom - Relay* Juelich, Germany. Last day of testing 25 February 2001.

Start Stop KHz Azi. Target, Language, CIRAF Zones

LITHUANIA: The *Lithuanian Radio* is looking for your help! Several weeks ago the Lithuanian Radio started to transmit their programs to NoAM directly from Lithuania. The transmitter is located in Sitkunai, about 20 km northwest from the city of Kaunas. Even though the economical situation in Lithuania is very difficult, the funding was found (approx \$250.000 US) for the construction of a new, modern antenna. A beautiful antenna was built with the height of 110 meters (approximately 350 feet) with the radiation direction toward NoAM - azimuth 310 degra. It is a collinear, four level, four dipole system (a total of 16 dipoles). The gain is about 20 dB which is about 100 times! The antenna is wideband and can operate between 6 and 12 MHz. A new, modern 100 kW transmitter was also purchased which cost a great deal of money. Up until now, programs from Lithuanian Radio to NoAM were transmitted from Germany. Understandably, this was a very large expense. Now, however, transmitting the programs directly from Lithuania will save a great deal of money. For several weeks now the new transmitter is transmitting in the 31 mb. At first, an attempt was made to use 9735. Now 9875 is utilized between 0000-0100. Experiments are also conducted in the 12 MHz region while looking for a clear frequency. LY2NX and K9WR have visited this station twice during December. There were discussions with engineers in determining the best frequency and time. The engineers at the Sitkunai radio station are relying on the help of American Lithuanians. It would be very good to send reception reports. Comments regarding QRM or other interference are welcome as well as suggestions. Reports should be sent by email to Mr. Petras (Peter) Leskevicius, PELES@LRTC.LT (Rimas Zakarevicius, LY2NX via BC-DX #501; 2000 Dec 26)

LUXEMBOURG: *Radio Luxembourg* French programming from Luxembourg on the French service of RTL 234 kHz began broadcasting again from the 16th January, one month after it was closed. Programs from Luxembourg are now heard 0000-0300 CET Monday to Sunday, news are broadcast hourly from Paris. The schedule:

Mon-Thu	0000-0300	'Les Nocturnes'	by Georges Lang
Fri	0000-0300	'WRTL Country'	by Georges Lang
Sat	0000-0200	'Saga'	by Georges Lang
Sat	0200-0300	'Les Nocturnes'	by Jean-Francois Johann
Sun	0000-0300	'Classic Rock'	by Jean-Francois Johann

(Stephane Veron; January 20, 2001)

MYANMAR: Observations of *Radio Myanmar* and *Defence Forces Broadcasting Station*:

Poor but clear signal from R Myanmar on 4725, 1335-1440 in Verncaular, 1440-1505* in English, giving results of some lottery or lotto or quiz. Usually cl-down is around 1440 on that frequency. (Rumen Pankov via BC-DX #503, 2000 Dec 31/ 2001 Jan 1)

6570 Defense Forces Broadcasting Stn presumed here. 1615 local pop mx with no annts, 1630 annts by man, woman and another woman in local languages, on the second long annt Myanmar heard, instrumental tune on local instruments and off 1633. (Mike Barraclough via BC-DX #503, 2001 Jan 18)

6570 The Defense Forces Broadcasting Stn was listed as being a Thai-Kadai language, then listed Shanor Karen. Shan is a member of the Thai family (Kadai is a subgroup) and Karen is part of the Sino-Tibetan family, probably it's own subgroup. (Liz Cameron via BC-DX #503, 2001 Jan 13)

4725 R Myanmar w/ excellent signal 1455-1510.5 w/ man talking about poetry (English). Unusual signal level - tx hum in background. This freq not often hrd after normal 1330 s-off. On Jan 13 same channel was hrd 1450 to past 1502 w/ woman ann in Myanmar, not English, S4 level.

v5986 R Myanmar w/progr of US pop vocals 1508-1514, woman ann w/ ID 1514 fol by martial progr mx to 1515. Woman ann w/ time (9:45), stn annmt and nx at 1515-1531. Light inst mx from "Titanic" 1533-1542. S4 level w/ no QRM. This channel relatively clear after VOA Udorn s-off 1400.

(Bruce Churchill at Cumbre via BC-DX #503, 2001 Jan 13)

NEPAL: *Radio Nepal* transmits on following frequencies: At MW - 576 khz, 648 khz, 684 khz, 792 khz, 810 khz and 1143 khz. At SW - 3230 khz / 7165 khz, 5005 khz. Fax: 977-1-221952 and postal address Radio Broadcasting Service, P.O. Box 634, Singha Durbar, Kathmandu, Nepal. (R. Nepal webpage via JKB, 17 Feb 2001)

NEW ZEALAND: *Radio New Zealand International - RNZI* valid schedule 25 December, 2000 to 18 March 2001. Address: P.O.Box 123, Wellington, New Zealand. Fax: 00 64 4 474 1433 and e-mail address is info@rnzi.com

UTC	kHz	Target	AZI	Day
1650-1850	11725	NE Pacific, Samoa, Cook Islands	35'	Monday to Friday

Dear Friends,

Welcome to the second issue of this year.

This time we have many exciting logs from new contributors being reported this month. With so many loggings there could be some instances where the same log has been reported by several members. In

Where are you headed, Deutsche Welle?

by H. Merschmann

No one can receive it, but everyone pays for it. Deutsche Welle is known only through hearsay in its own country. For this reason, the German foreign broadcasting station, which is fully financed by taxpayers' money (1999: DEM 606m), has always met with little interest.

That changed when Minister of State Michael Naumann hit the broadcasting station with a budget reduction of DEM 54m last year and announced massive layoffs. That led to a debate on the meaning and purpose of a foreign broadcasting station in times of global digital media. Does one want to make programmes for Germans abroad or for foreigners interested in German culture? And with what media does one appeal to them: television, shortwave or Internet? A result of this discussion is an expert opinion that Jo Groebel, director of the European Media Institute, presented in Berlin last weekend on behalf of the Friedrich Ebert Foundation close to the SPD [Social Democratic Party of Germany].

"The role of foreign radio broadcasting - a comparative analysis of the experiences and trends in five countries" is the title of the study that consults the foreign broadcasting stations of Great Britain, the United States, France and the Netherlands for a comparison with Deutsche Welle.

"We attempted to describe the profiles, missions, turnover, functions and target-group definitions of various international foreign radio broadcast facilities," Jo Groebel explains. That resulted in a report which, according to Groebel, does not pretend to have "any characteristics of an audit" and for this reason alone does not shake the foundations of Deutsche Welle. They are standing by the principal function of the broadcast station, to pursue an appropriate representation of the economic and cultural country of Germany abroad. But: "There is a need for a more precise mission of presenting Germany in the world with complete journalistic independence."

Because the same frequency bands based on the same channels will be used and the handsets will continue to be available in the same range of choices (fixed, portable and mobile radio), the change over to the new system will be completely transparent. What will be noticeable however will be the improved quality with crystal clear reception, the more diverse programme content as a result of the increase of broadcasters that will be able to be accommodated in the existing AM bands as well as richer content that the new digital features will offer.

"It is a breath of fresh air" said Peter Senger, Chairman of Digital Radio Mondiale (DRM). "This landmark decision will bring affordable digital quality sound and services to the world radio markets that will surpass listeners' expectations and will revive the broadcasting market in areas whose development was stagnating" adding "This is the biggest advancement in broadcasting since the invention of the transistor".

Robert Struble, President and Chief Executive Officer of iBiquity Digital Corp. hailed the decision as a significant milestone on the road towards a global standard for AM digital broadcasting. "Digital broadcasting offers the potential for new and improved services to AM radio listeners who will greatly benefit from the existence of a worldwide standard for the transmission and reception of digital signals", he said.

For manufacturers, it brings a second lease of life to older AM technologies with increased market potential for transmitters and receivers. It also makes it possible to optimize the return on investment for dual technology components for low data rate systems applied to narrow-band transmission channels. Considering that there are potentially some 2.5 billion radio receivers that will ultimately be candidates for replacement, of which some 700 million for shortwavereception, combined with an estimated 1000 transmitters worldwide, the benefit for equipment and semiconductor manufacturers is clear.

For broadcasters, the new technology means that they will be able to bring FM quality to AM bands at substantially lower costs. Because the new technology is accommodating existing frequency plans, they will be able to modify and continue to use their existing transmitters provided they are fairly modern. Digital AM will also be much more spectrum-efficient, making it possible to reduce the power of transmitters by as much as 25% while maintaining the same coverage area. Broadcasters will also be able to transmit programmes in two languages, a plus in bilingual countries or in border zones between countries that use different languages.

Better audio quality and value-added services for listeners (data, text or still images) will also translate into increased audience interest and increased advertising revenue as a result and new business opportunities. This integration of audio and wireless data transmission will enable a variety of consumer applications, such as station and programme content, local traffic and weather information, news and much more. Because the digital signal is more reliable and robust, it can be nearly interference-free. Receivers will tune to the best possible reception quality of a given station, based on the strength of the signal and the AFS (Automatic Frequency Switching) system, within any of the long, medium and shortwave bands.

Digital AM radio is expected to reach mass market by 2003. In the transition period, transmitters and receivers will handle both analogue and digital signals, thus enabling broadcasters who have large operations in the AM band to opt for simulcast to continue serving their customers while building a new market. Manufacturers are expected to provide the market with multistandard receivers to enable the simultaneous reception of analogue AM and FM as well as digital AM stations. In vacant AM channels, broadcasters will be able to launch full digital AM as the receivers will recognize both analogue and digital signals.

The approval of a worldwide standard should give the possibility to achieve economies of scale in the production and deployment of transmitters and receivers with potentially lower costs to consumers while giving broadcasters the flexibility to migrate to digital AM radio according to market demand.

(Mr. A. Magenta, RAI - Radiotelevisione Italiana via ITU - E-mail: magenta@rai.it)

Antenna Showdown in Denmark

by Martin Elbe

From 20 to 27 September I was guest in Wilhelm Herbst's house near Fjerritslev in northern Jutland. Wilhelm bought an old farmhouse up there in the middle of nowhere. And he converted the farmhouse into a DX-receiving station. On an area covering 4.4 hectares he constructed a lot of antennas. Apart from some longwires (25 and 44 meters, a 6 m Vertical) there are the following Beverage antennas:

150° 160m
 180° 140m
 195° 160m
 210° 160m
 220° 120m
 230° 90m, in Winter up to 290m when the neighbouring farmers don't need the fields.
 245° 80m, in Winter 270m.
 260° 80m
 270° 75m
 280° 75m, in Winter 250m.
 290° 80m
 300° 90m
 315° 240m
 330° 175m
 345° 330m
 0° 330m

OK, in northern Finland or Sweden an antenna of 80m is not regarded as a Beverage antenna, but don't let us be more catholic than the pope. ;-) All antennas are supported either by bamboosticks or by tomato-sticks, height about 1.5m, the antennas are grounded via a resistor at the end.

And then there are antennas for FM-DX (an 8-element Yagi with Rotor and TV antennas). Alone on FM more than 1300 stations from 32 countries were logged so far. Not bad at all!

Anyway, a nice selection of antennas to choose from, and Wilhelm rents out his home as a "DX-Hotel". He has 3 guestrooms and space for 3 DXers to listen. Accomodation is cheap, in summer it's 90 DKK (less than 11 US\$) per day, in winter it's 120 DKK. Interested? Contact Wilhelm Herbst, Husbyvej 183, DK-9690 Fjerritslev for more information.

All antennas can be selected via switchboards.

I had my Wellbrook K9AY with me to compare the performance of this antenna in relation to the Beverage farm.

Concerning the K9AY here are some quotes of Wellbrook's Webpage, <http://www.wellbrook.uk.com/K9AY.html>

The Wellbrook antenna provides a cardioid reception pattern with up to 30dB front-to-back ratio over a very large bandwidth. The antenna uses two Delta Loops with a reversible beam direction to provide a 360 degree coverage.

A unique feature of the K9AY, is the Remote Controlled Variable Termination. This allows the user to optimise the null during changes in the arrival angle of interfering signals and provides a considerable improvement in reception quality.

The K9AY is specifically designed to simplify the construction of this Loop antenna. The K9AY comprises of two assemblies: Antenna Control Unit, and an Antenna Head Unit.

The Antenna Control Unit provides the antenna control functions, supplies the power to the Antenna Head Unit, and feeds the signal to the receiver. A 10-15dB Broadband Amplifier is fitted. The Antenna Head Unit provides the variable antenna termination, Beam Reversal and the Loop selection electronics. Integrated

into the Antenna Head Unit is a 9:1 Balun. This Balun has the feeder winding isolated from the antenna so that the antenna is magnetically coupled to the feeder. This reduces antenna/feeder interaction and mains borne noise from TVs, computers etc.

The K9AY antenna uses a coaxial feeder cable without an antenna tuner. Low noise performance is assured because there is no antenna return path to mains earth. The K9AY, is also suitable for non-directional short wave reception and will provide far lower noise performance (similar to the T2FD) than an equivalent length Longwire antenna. The electronics are encapsulated in synthetic resin to form a weather proof construction.

Comprehensive operating and installation instructions guide the user to a easy and safe erection. The K9AY is supplied complete with an Antenna Control Unit, Antenna Head Unit. To operate the K9AY, the user must provide a 12volt regulated Power Supply, antennna wire, the 50 ohm feeder cable and the twin lead control wire.

K9AY FEATURES

- Up to 30dB F/B ratio 60kHz to 2MHz · Lower noise than Longwire
- 2 Loops for 360 degree coverage · Coaxial feeder reduces local noise
- Variable Null depth control · Static discharge path to earth
- Rotary beam direction control · Optional 10-15dB amplifier
- Omni-directional up to 30MHz · Weather proof construction

K9AY ANTENNA

This antenna was originally designed in the US by a radio amateur, Gary Breed - K9AY, and has been used successfully used by radio amateurs and medium wave listeners.

The unique feature of the K9AY is the constant high front to back ratio over a very large bandwidth. The K9AY is probably the only medium size passive antenna that can provide a significant improvement to medium and long wave reception.

The antenna simply requires up to two 25m wire Loops. A single 8m vertical support is required such as a tree. However, it is important that the antenna is erected away from buildings and sources of interference. The K9AY only requires an area of 9m x 9m to complete the erection. Thus, it will fit into most gardens.

SETTING UP THE BEAST

So much from Wellbrook. To erect the Loops I had my Spieth-mast with me. That's a telescopic fiberglass mast, fully erected 10m high, collapsed a little bit over a meter long and about 1.5 kg of weight. For earthing I used a 1m long copperpipe, the earth was rather wet, so that seemed to be enough. On sandy soil, rock or under other poor earthing conditions you may use a counterpoise instead. Both loops had a length of 20 meters. My fault that I did not take more with me, I think a little bit more wire would have given better signals.

Construction was rather simple. First I hammered a broom-stick into the soil. Then I connected both loops at about 7m height at the mast. Then I erected the mast and putted it over the broom-stick. Then I used 4 tomatosticks to fix the loops around the center mast. That proofed to be a bad solution. Next day I went to Fjerritslev in order to buy 4 tent pegs instead. I couldn't find any, so I bought 4 Kebabspits and a Nylonrope. With that I could easily fix the antenna.

Of course the Spieth-mast bended like a bow, but that's pretty normal and just an aesthetic problem. The mast sometimes tends to collapse under windy conditions, so I fixed the elements with a bit of force. No good idea: That turned out to be really bomb-proof when I dismantled the antenna after a week and there was a lot of swearing and four-letter words until the mast was fully collpsed. :-) Better use a bit of tape to fix the elements.

(continued in DX MAGAZINE 3/2001)

SW Reception Propagation of Voice of Mongolia

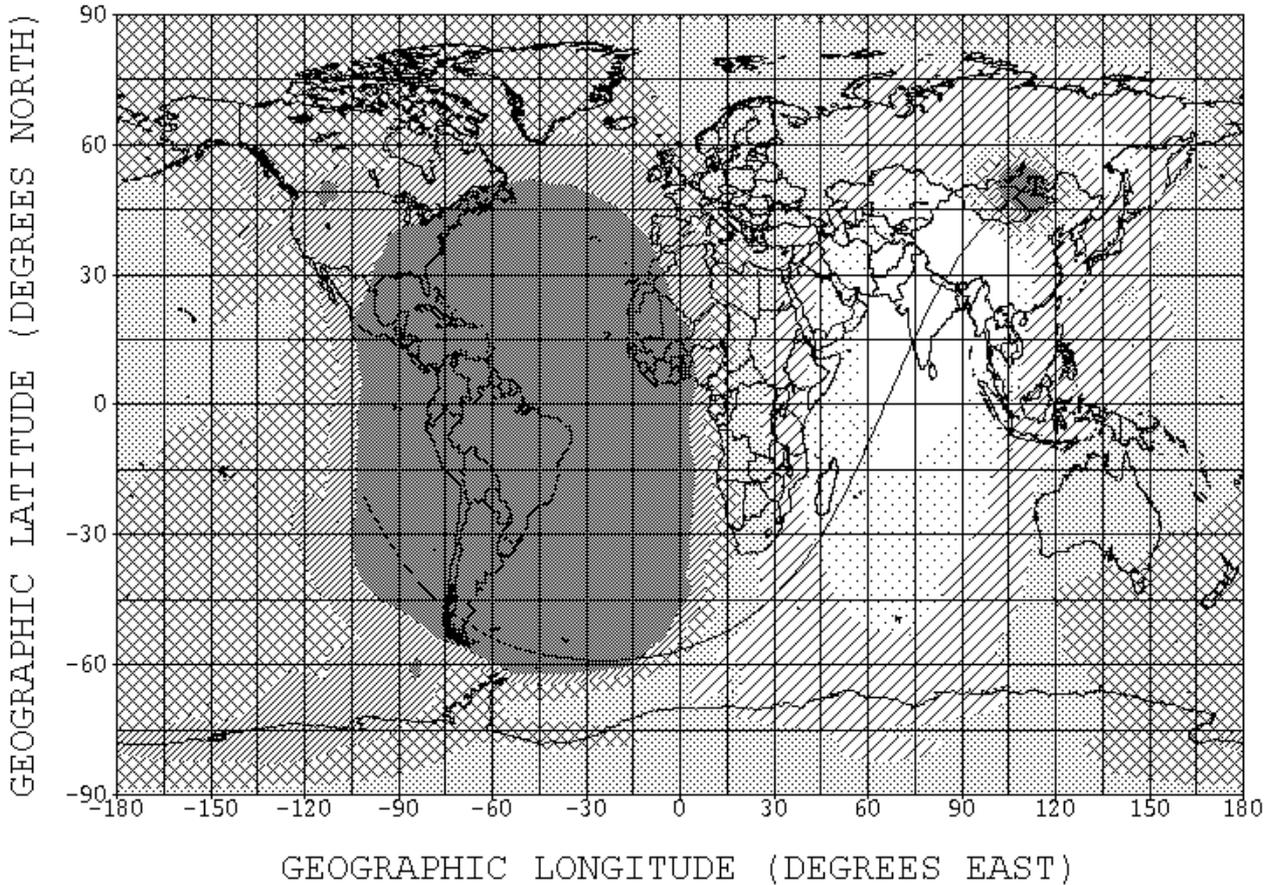

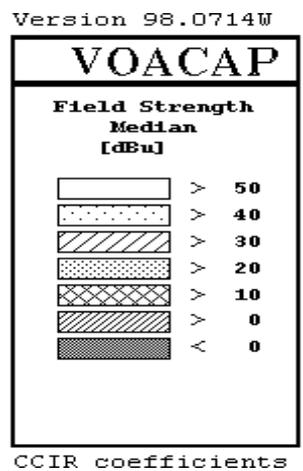

The overseas service of the Voice of Mongolia was founded in 1964. Since then it has been introducing Mongolia to the rest of the world. The first broadcast in September 1964 was a half hour transmission in the Mongolian and Chinese languages, beamed to China. In the next few years, Mongolian international broadcasting expanded in terms of languages used, broadcast hours and target areas. The English service of Radio Ulaanbaatar, which was renamed The Voice Of Mongolia on January 1st, 1997, was launched on January 29th, 1965. Today the service transmits its broadcasts under the name "The Voice Of Mongolia" in the Mongolian, English, Chinese, Russian and Japanese languages. The Voice of Mongolia transmits a half-hour program on a daily basis in each of the mentioned languages. All of The Voice Of Mongolia's broadcasts come directly from its Khonkhor Transmitting Station, about 25 km east of Ulaanbaatar, Mongolia's capital. It broadcasts through Soviet-made 100, 250, and 500 kW transmitters and curtain antennas built in the mid sixties. You may be able to hear some of the broadcasts which are not directed to your part of the world providing fair reception in South America and in Southern Africa and in Europe as well. The Voice Of Mongolia is the country's only overseas broadcasting service and is operated by Mongolian National Radio & Television, a public service broadcaster of the Mongolian Government. It broadcasts a total of 8 hours a day in 5 languages - Mongolian, English, Chinese, Russian and Japanese. All reception reports and personal letters should be sent to the station's address marked for a particular language section (e.g. English Section): Voice of Mongolia, C.P.O.Box-365, Ulaanbaatar 13, MONGOLIA or via Email: radiomongolia@magicnet.mn

The daily English transmissions beamed at 178 degrees will be well heard in Australia and whole Asia, the primary targets of Voice of Mongolia programs: 1030-1100 UTC on 12085 kHz, beam 178 deg, power 250 kW and 1500-1530 UTC on 12015 kHz, beam 178 deg, power 50 kW. The other daily English transmissions will cover more than the primary target areas, so take a look at the propagation maps to choose the best conditions at your location.
